2: Troy University, Alabama

Occupational licensing makes it illegal to work in an occupation before meeting state-mandated entry requirements that often include minimum levels of education and training, paying fees to the state, and passing exams. Nationally, 21% of workers are licensed.¹

Licensing requirements for the same profession vary significantly across states. The 2023 State Occupational Licensing Index (SOLI) ranks states by the number of occupations that are licensed.² The SOLI database focuses on 331 occupations that are available in the Knee Center licensing database.³

Alaska's SOLI ranking

In the 2023 SOLI, Alaska ranks 44th nationally (with 1st being the most burdensome). Alaska makes it illegal to work in 162 of the 331 occupations examined. This is 17 less occupations than the national average of 179, but 15 more than Kansas—the state with the fewest legal barriers (147) to working nationally.

Uniquely licensed occupations in Alaska

Among the 162 occupations that Alaska establishes minimum entry requirements to begin working, there are 8 occupations that are licensed in 20 states or fewer nationally. Table 1

³ <https://csorwvu.com/>

provides a full list of these occupations and there is also a separate excel file with full details for interested readers.

Alaska is the only state in the country to issue a separate license for a mechanical administrator. Mechanical administrators can obtain specialty credentials to supervise commercial/industrial plumbing, HVAC, heating/cooling, and other specialty services. Alaska is also one of 5 states to issue a separate license for a lineman and one of 17 states that licenses pyrotechnic operators.

Table 1: Uniquely licensed occupations in Alaska

Occupation	Total States
Mechanical Administrator	1
Lineman	5
Psychological Associate	8
Insurance Administrator	12
Pyrotechnic Operator	17
Body Piercing Artist	18
Optician Apprentice/Trainee	18
Behavior Analyst Assistant	20

Why Licensing Reform is Important

By making it illegal to work in 162 occupations, and uniquely licensing at least 8 occupations, Alaska is imposing cost on its citizens.

Existing economic research suggests that occupational licensing raises prices by as much as 16%.⁴ Licensing also reduces employment by as much as 27% by making it more difficult to begin working in licensed professions.⁵ Nationally, it is estimated that occupational licensing results in 2 million fewer jobs being created each year.⁶

Although licensing may have historically resulted in some benefits to consumers⁷, there is little evidence that it is helping consumers in the present. Recent work finds little evidence that

occupational licensing is improving the quality of services provided to consumers in the US and Europe.⁸

In summary, Alaska currently places unique restrictions on its citizens to begin working. These restrictions are very costly and generate little to no measurable benefits for consumers. Following the lead of the majority of other states and choosing less restrictive ways to regulate and protect consumers would be in the best interest of Alaska citizens.
